# GROWING HOTTER.

A Theory of Astronomical Physics as to the Sun.

#### THE NEBULAR HYPOTHESIS

Upset by Dr. See's Investigations Contrary to the Commonly Received Doctrine of Star Formation Through the Gradual Cooling of Gascons Matter-Dr. See Asserts the Cosmic Process to Have been Quite the Reverse.

Washington Post: Dr. T. J. J. See, the famous Missouri astronomer, in a lecture before the Lowell Institute, Boston, will announce to-night a new law of temperature for sun, stars and nebulae... Prof. See's theory is that our sun and other gaseous heavenly bodies are growing hotter and hotter from generation to generation.

The young astronomer has found a law which, it is asserted, is almost as universal as Newton's law of gravita tion. It applies to all gaseous stars and nebulae throughout the universe, and above throughout the universe, and shows how the temperature of gaseous worlds is regulated. The result will be a radical revolution of astronomical theories of the ages of the stars. Dr. See will show by mathematical demonstration that in the evolution of a gaseous star the temperature of the mass, yarles inversely as the radius. The law is even simpler than that of Newtonian cravitation remains of the mass of the radius.

The law is even simpler than that of Newtonian's gravitation.

For more than a century it has been supposed that stars form from the condensation of nebulae. Laplace outlined the accepted theories, and gave the first grand picture of the process by which the planetary system has developed. This new discovery by Dr. See will radically modify the fid nebulae.

which the planetary system has developed. This new discovery by Dr. See will radically modify the old nebular hypothesis, if it does not completely overthrow it.

According to Laplace our planets were very hot when first formed. According to Dr. See the temperature of these masses was then very low indeed, almost at absolute zero of space. Laplace's theory was assumption, are and simple, and was never verified, though adopted by all astronomics for the past century. past century.

Laplace and Herschel assumed that

the nebulae are at a great temperature, and that the heat of the stars arose from the condensation of this matter. Dr. See shows that the nebulae are excessively cold and have never been hot at any past age. As the nebulae con-densed, the temperature rose at first at any past age. As the nebulae condensed, the temperature rose at first very slowly, and at length more rapidly, the law being that the heat varies inversely as the radius. The greatest heat occurs when the radius is smallest and when the radius is very great, as in the case of the widely expanded nebulae, the temperature is at the absolute zero of space. The nebulae are thus involved in a death chill while the stars are enormously hot. Such stars as Sirius and Vega are intensely hot, and are far removed from the condition of nebulae. Prof. See says that Sirius and Vega and other stars of the hottest class are nearing the stage of liquefaction and that their future cosmical life is of short duration. When they begin to wane in luster, their brilliant light will henceforth be shrouded in perpetual darkness. These views are diametrically opposed to those held by leading Europyan savants.

Dr. See, says the sun is growing hotter from lage to age, but as the disk is getting smaller on account of shrinkase, the earth will not in the future receive as meeting the firm the sun as it does now. Thus in geological ages the earth was warmer than at present. As the sun's temperature, determined by experiment, is found to be about \$000 degrees centigrade, it follows from the new law of temperature dark was first separated from the sun,

new-law of temperature that when the earth was first separated from the sun, the temperature of the terrestrial neb-ulae mass was forty degrees on the absolute scale, or 230 degrees below our present rate.

absolute scale, or 230 degrees below our present zero.

The earth was thus not hot, as Laplace and the geologists claim, but intensely, cold. As the mass shrank and contracted, it grew hotter according to Prof. See. The temperature of the earth was never higher than the melting point of lava as it issues from our volcances; moreover, in descending, to the bowels of the earth the temperature does not increase; after a certain depth is reached, but is uniform throughout the whole interior of the globe. It is thought that these conclusions must radically affect geological theories.

Dr. See points out that the planets,

radically affect-geological theories.

Dr. See points out that the planets,
Jupiter and Saiurn, are still gaseous,
and therefore have never been hot in
the past, as Laplace supposed, but may
become hotter and even self-luminous
al some future time. In consequence of
this change of view all the theories of
Kant, Folinor, and Proctor, who supposed that Jupiter and Saiurn are
cooling down, will have to be abandoned. The temperatures of all the great
planets are rising, and Jupiter, Saiurn,
Uranus, and Neptune may eventually
give light of their own. When the solar
nebulac extended to the orbit of Nen-

give light of their own. When the solar nebulac extended to the orbit of Neptune it was intensely cold and probably gave no appreciable light.

Arguing by analogy, Prof. See, concludes that the heavens are full of nebulae which mortal eye has never seen because these cold masses are wholly invisible. There will thus remain other invisible worlds for astronomers to search for.

Dr. See is a native of Missouri, a Ph. D. of Berlin, a fellow of the Royal Astronomical Society, a member of the Astronomical Society, a member of the Astronomiche Gesellschaft, and is perhaps the most promising astronomer of his age in the world.

## Otis' Inaction.

LONDON, Jan .12.-The Dally Mall publishes the following dispatch from Hong Kong:

The Americans who are arriving the Americans who are arriving here from Manila complain bitterly of the inaction of Major General Otis, particularly in leaving the Manila water supply at the mercy of the rebels. They may a collision between the Americans and insurgents is inevitable, Aguinaldo's dispatches to the Filipino junta here have been stopped."

#### Wants to Bury the Hatchet. LONDON, Jan. 12.-The Madrid cor ndent of the Times says:

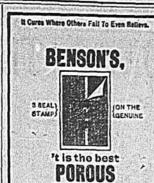

respondent of the Times says:

"It is not to the advantage of Spain that a settlement in the Philippines is delayed. The fact is fully realized that Spanish shipping is, suffering from the uncertainty as well as the interests of the religious orders whose property is not stuke and many of whose members are prisoners.

"It is not true that the Spanish com manders have been ordered to give Americans trouble. Spain desires bury the hatchet."

#### Yellow Jaundice Cured.

Suffering humanity should be supplied with every means possible for its relief. It is with pleasure we publish the following: "This is to certif" that I was a terrible sufferer from reliow Jaundice for over six months, and was treated by some of the best physicians in our city, and all to no avail. Dr. Bell, our druggist recommended Electric Bitters; and after taking two bottlea I was entirely cured. I now take great pleasure in recommending them to any person suffering from this terrible maindy. I am gratefully yours. "A. Hoggriy, Lexington Ky." le maindy. I am gratefully yours, A. Hoggriy, Lexington, Ky." old by Logan Drug Co.

rests inflammation and cures quicker than any other external application. Price 22 cents. All Druggists Of m'frs, Seabury & Johnson, N.Y., if unobtainable

#### A LUCKY ESCAPE.

The Paris Courts Let Mme. Paulmier Off With a Damage Fee of 15,000 Francs to M. Oliver, Whom She shot Last September.

Great interest has been manifested in the trial of Mme. Paulmier, wife of M. Paulmier, a well known member of the

chamber of deputies, Parls, who sho M. Oliver, of La Lanterne, last Septem-ber, because of an article reflecting on her husband. A notable feature of the case was that the judge gave permis sion to the advocate of Mme. Paulmier to issue tickets for places in the court room, and the result was that an-immense crowd or fashionable Parislans were present to listen to the proceed-

The trial was extremely exciting from beginning to end, and it is said that Mme. Paulmier's comparatively light sentence is due to the touching reference which she made to-her daughter while on the witness stand. She testified that Mile. Paulmier was young, talented, and of unquestionable social standing.

#### The University Girls.

To the Editor of the Intelligencer.
SIR:-The girls of our state only needed the opportunity of getting a liberal education, to avail themselves of the advantages offered them, and have shown by their presence, over a hundred strong, that our university only needed to extend a welcoming hand to have the invitation gladly accepted.

It is also gratifying that they are showing they mean to be a power so-clally and intellectually. The Woman's League has united the women students into an organization whose aims are to promote fellowship among the women students, to provide intellectual treats, and to encourse a bus prizes those who promote fellowship among the women students, to provide intellectual treats, and to encourage by prizes those who may possess talent in various directions. The desire is that the women of the university receive culture for every part of their natures. A public entertainment course has been arranged. A year book will be published in the spring for the purpose of encouraging literary talent among the women of the University.

There is one very serious objection to many of our girls taking these advantages. Numerous parents might object to sending young daughters to any school where there is no proper home where they can be under supervision and control of some wise person to see that they make good use of their time and choose suitable companions.

The average girl has little thought of the fitting and reads the earlies to see the sending of the serious parents of the fitting and reads the earliest thought of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the fitting and reads the earliest the sending of the earliest t

The average girl has little thought of the future, and needs the guidance of a

wise counsellor.

It is no reflection on the girls of our state when we sale it.

wise counsellor.

It is no reflection on the girls of our state when we ask that this objection he met, by giving them a dormitory, or woman's hall, where they can be under proper training, and supervision. Other states much older than ours have found this advisable. Almost without exception, all schools and universities where girls are admitted have provided a suitable building where they could find a home, and where parents would willingly send their daughters. Our state has awakened to the fact that to make real advancement our firls must be educated and have the same advantages as our boys. The advance has been made, and unich can be done to hasten the progress of this army of sirls and women who will become teachers and mothers of our beloved state, and it lies in the hands of our coming legislature to take another step in the advancement of our girls by making a liberal appropriation for such a home or hall as may be needed. Money could not be better spent and our state will be fully repaid by the high type of womanhood that the future will bring, who will be morally, intellectually and spiritually, of which our state may be justly proud.

La Grippe Successfully Treated.

#### In Grippe Successfully Treated.

Im Grippe Successfully Treated.
"I have just recovered from the second attack of la grippe this year," says Mr. James A. Jones, publisher of the Leader, Mexia, Texas. "In the latter case I used Chamberlain's Cough Remedy, and I think with considerable success, only being in bed a little over two days, against ten days for the fortmer attack. The second attack I am satisfied would have been equally an satisfied would have been equally as had as the first but for the use of this remedy, as I had to go to bed in about six hours after being 'struck' with it, while in the first case I was able to attend to business about two days before getting 'down.' For sale by druggists.

#### Relief in Six Hours

Relief is Six Hours.

Distressing Kidney and Bladder discase relieved in six hours by "New
Great: South American Kidney Cure. It
is a great surprise on account of its exceeding promptness in relieving pain in
bladder, kidneys and back, in, male or
formile. Relieves retention of water almost immediately. If you want quick
relief and cure this is the remedy. Sold
by R. H. List, druggist, Wheeling, W.
Va. 118:5

If the Baby is Cutting Teeth. If the Baby is Cutting Accan.
Be sure and use that old and well-tried
remedy. Mrs. Winslow's Soothing
Syrup, for children teething. It soothes
the childr softens the gum, allays all Syrup, for children teelbing. It soot the childr softens the gum, allnys pain, cures wind colic and is the remedy for diarrhoea. Twenty-cents a bottle.

#### FINANCE AND TRADE.

The Features of the Money and Stock

Markets. NEW YORK, Jan. 12 .- Money on call steady at 2%@2% per cent; last loan, 2% per cent. Prime mercantile paper 3@3% per cent. Sterling exchange steady, with actual business in bankers' bills at \$4 844@4 84% for demand and at \$4 82@4 82% for sixty days; posted rates, \$4 83@4 85%; commercial bills 34 81@4 81%. Silver certificates, 59%P 60%c. Bar silver, 59%c. Mexican dol-

44 8144 8134 Silver certificates, 1946 604c. Bar silver, 594c. Mexican dollars, 465c.

The not changes in prices for the day were rather mixed, but with a preponderance of gains. The movements seemed largely to be the outcome of an organized campaign against the short interests. One group of stocks after another were boosted, leaving the bears in doubt where the next movement would set in. The activity and strength was in the glit-edged railway shares, and then successively dritted into the Pacifics, the Flower stocks and then back into the Pacifics again. Great Northern preferred made an extreme gain of 7½ per cent; Pennsylvania, 4 per cent; Jersey Central, 4 per cent; American District Telegraph, 3½ per cent; Third Avenue, 3 per cent: Brooklyn \$2\$ ransit, 2½ per cent; Norfolk & Western, 2% per cent; Durlington, 1½ per cent, and the Pacifics 2 to 3½ per cent, part of which gains were lost in the late dealings. The Iron and Steel in Western, 2% per cent: Burlington, 1% per cent, and the Pacifics 2 to 3% per cent, part of which gains were lost in the late dealings. The Iron and Steel shares showed a sagging tendency, although they, too, enjoyed periods of of strength. London was again a sell-er on balance, although arbitrage dealings were somewhat interrupted, and the cables worked poorly. The advance in Pennsylvania, it was assumed, had some relation to a closer union between its Eastern and Western connections. Predictions of a very favorable December statement stimulated interest in Burlington. Norhern Pacific was strong on rather indefinite rumors to the effect that some arrangement of their differences with rival companies was likely. The purchases of Jersey Central, rumor had it, were by insiders in expectation of increased trailic, because of new industries recently established along the line.

In expectation of increased traffic, because of new industries recently established along the line.

The extent of recent sales for London account is shown by the large borrowing of stocks in this market until the stocks sold arrive from the other side. It is estimated that fully 150,000 shares of such stock is now borrowed here, of which 100,000 shares are expected to arrive by Saturday week. Chicago is displaying great interest in the New York market, and it is estimated that nearly a quarter of the business on the exchange comes over Chicago wires. Transactions in stocks to-day was little short of a million shares. Realizations in the linal dealings gave the market a heavy tone at the closing.

Improvements occurred in Improvements occurred in bond prices during the forenoon but the mar-ket showed weakness in spots, and closed irregular. Total sales, 5,255,000 closed irregular. Total sales, 5,355,000 shares United States old 4's registered advanced 4/per cent in the bid price. BONDS AND STOCK QUOTATIONS.

#### Breadstuffs and Provisions.

CHICAGO-Reports of a heavy crop of wheat of good quality in the Argentima broke the confidence of holders of wheat to-day and robbed the market of Mc gain made earlier in the session. May closed with Mc loss. Corn and outs left off a shade higher. Pork declined 5c and lard and ribs 3%c each.

clined 5c and lard and ribs 2½c cach.

There was enough bullish feeling among traders carried over from yesterday to start wheat strong, although the general situation before business began suggested a downward course. Liverpool cables came only ¼d higher and the Price Current spoke of the prospects for winter wheat more encouragingly. One point of the early news concerning domestic receipts was interpreted favorably to the bulls. Northwest receipts were quite moderate, 412 cars, against 441 for the same day last week and 532 for the corresponding day last year and Chicago received 148 cars, of which only 25 graded contracts. May opened a shade

ate, 412 cars, against 411 for the same day last week and 332 for the corresponding day last year and Chicago received 148 cars, of which only 25 graded contracts. May opened a shade lower at 70%671c and as the market began to show strength, shorts took fright and covered. As there was very little for sale competition soon helped the price, and May advanced to Ti-ke. A private message from a leading local trader who is abroad reported Russians cancelling rye sales and declared that France was a buyer of wheat. This had a builish effect and as a New York syndicate which was reported long about 5,000,000 bushels bought on every little dip, the price held steadily within 5c of the top the-greater portion of the session. The agarcation of the western primary market receipts was 65,000 bushels, nearly double that for the same day last year. The clearances of wheat and flour at the Atlantic seaboard which acted as a stimulant to declining prices yesterday had a depressing effect to-day as only 401000 bushels were reported handled. Bepreading effect to-day as only 401000 bushels were reported handled. The ports received late in the day said that, the Argentine wheat crop would be of large proportions and the grain of good quality. As the expectation of a deficit in that quarter has been one of the sustaining features here of late, this piece of news had a weakening effect and may declined to 70% buyers, the closing price.

Damp weather and bullish news from the country concerning the demand for feeding and reduced stocks in first hands strengthened corn. May opened a shade higher at 374,6237% and as buying orders was quite numerous the price during the first hour and a half was forced slowly but persistently up to 37%c. Receipts were 714 cars. Export clearances were small, 225,000 bushels, but the demand here from the east was good and some sales for phipment were reported. Railroad cars also were less scarce, although shippers still complained of beling unable to procure all they wanted.

When wheat in the last hour

The to 37330-32c and closed at 37420 373c.
Light offerings and small receipts, 131 cars, strengthened a bit, but there was a good export inquiry and a few speculative orders were sufficient to send prices upward. May opened a shade lower at 27560273c and advanced to 32c, where it held steady during the greater portion of the session. Near the end, however, oats yielded with the other grains and May sagged ofto 27360 and closed at 27360273c.

A light run of hogs and a good ex-

port demand for ment products started provisions strong. The market was called upon to absorb a good deal of long property, but as commission houses bought freely, prices were well maintained until wheat and corn began to show weakness. Then provisions became quite heavy and the early gain was lost. May pork opened a shade higher at 10 22½/61 \$2. advanced to \$10 27½, then sold oft to \$10 15 and closed at \$10 17½. May lard began unchanged at \$5 50; sold at \$5 \$2½, weakned to \$5 75 and closed at \$7. 1½. May ribs started unchanged at \$5 11½; rose to \$15 15, declined to \$5.07½/65 10 and Estimated receipts Thursday: left off at \$5 10.

Wheat, 116 cars: corn, 700 cars; outs, 175 cars; hogs, 30,000 head.
